

AMENDMENT

Please amend the above-identified application as follows:

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Withdrawn): A method for externally identifying a particular callee, said method comprising:

receiving a voice utterance for a callee at a server external to a trusted telephone network, wherein said trusted telephone network is processing a call to said callee; and

identifying a callee identity associated with said voice utterance at said server, such that said callee identity is transmittable as an authenticated identity of said callee for a call.

2. (Withdrawn): The method for externally identifying a particular callee according to claim 1, wherein receiving a voice utterance further comprises:

receiving said voice utterance through a secure channel between said server and said trusted telephone network.

3. (Withdrawn): The method for externally identifying a particular callee according to claim 1, wherein said trusted telephone network brokers said call between said callee and said server.
4. (Withdrawn): The method for externally identifying a particular callee according to claim 1, wherein said trusted telephone network comprises at least one public switching telephone network.
5. (Withdrawn): The method for externally identifying a particular callee according to claim 1, wherein said trusted telephone network comprises a private switching system.
6. (Withdrawn): The method for externally identifying a particular callee according to claim 1, further comprising:

enabling communication between said server and said trusted telephone network via a network comprising at least one from among an Intranet, the Internet, and a private network connection.
7. (Withdrawn): A system for externally identifying a particular callee, comprising:

a network communicatively connected to a trusted telephone network;

a telephone service server communicatively connected to said network;

means for receiving a voice utterance for a callee of a call transferred from said trusted telephone network to said telephone service server via said network; and

means for identifying a callee identity associated with said voice utterance at said telephone service server.

8. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said trusted telephone network brokers said call between said callee and said telephone service server.

9. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said means for receiving a voice utterance further comprises:

means for receiving said voice utterance through a secure channel between said telephone service server and said trusted telephone network.

10. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said trusted telephone network comprises at least one public switching telephone network.

11. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said trusted telephone network comprises a private switching system.

12. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said network comprises at least one of an Intranet, the Internet, and a private network connection.

13. (Withdrawn): The system for externally identifying a particular callee according to claim 7, wherein said network operates independent of said trusted telephone network.

14. (Withdrawn): A computer program product for externally identifying a particular callee, said computer program product comprising:

a recording medium;

means, recorded on said recording medium, for receiving a voice utterance for a callee at a server external to a trusted telephone network, wherein said trusted telephone network is processing a call to said callee; and

means, recorded on said recording medium, for identifying a callee identity associated with said voice utterance at said server, such that said callee identity is transmittable as an authenticated identity of said callee for a call.

15. (Withdrawn): The computer program product for externally identifying a particular callee according to claim 14, further comprising:

means, recorded on said recording medium, for receiving said voice utterance through a secure channel between said server and said trusted telephone network.

16. (Withdrawn): The computer program product for externally identifying a particular callee according to claim 14, further comprising:

means, recorded on said recording medium, for enabling communication between said server and said trusted telephone network via a network comprising at least one from among an Intranet, the Internet, and a private network connection.

17. (Currently Amended): A method provided by instructions stored in a computer readable medium for specifying telephone services for a particular callee, comprising:

detecting a call receipt condition from a destination device at a trusted telephone network;

brokering a connection between said destination device and an external server enabled to perform a callee identity authentication service, wherein the brokering a connection between said destination device and an external server further comprises:

transmitting a request for said callee identity authentication service via a signal gateway to a network for accessing said external server,

responsive to receiving access to said callee identity authentication service, transferring a call to said external server,

transferring a prompt for a voice utterance, received from said external server via a media gateway, to said destination device,

transferring a voice utterance by said callee through said media gateway to said network for accessing said external server, and

receiving said authenticated callee identity via said signal gateway at said trusted telephone network; and

responsive to receiving, from said external server, an authenticated callee identity of a callee utilizing said destination device, specifying services available to said callee according to said authenticated callee identity.

18. (Original): The method for specifying telephone services according to claim 17, wherein said server is accessible via a network outside said trusted telephone network.

19. (Original): The method for specifying telephone services according to claim 17, further comprising:

retrieving a callee profile for said authenticated callee identity; and

specifying a selection of services from among a plurality of services that are offered for said call according to said callee profile.

20. (Original): The method for specifying telephone services according to claim 17, wherein said authenticated callee identity is authenticated by a voice utterance of said callee.

21. (Canceled)

22. (Original): The method for specifying telephone services according to claim 17, wherein brokering a connection further comprises:

brokering a secure connection between said trusted telephone network and said external server.

23. (Previously Presented): The method for specifying telephone services according to claim 17, further comprising:

brokering a connection between an origin device accessible to a caller and said external service server, such that said caller is enabled to listen to authentication of said callee identity.

24. (Currently Amended): A system for specifying telephone services for a particular callee, comprising:

a trusted telephone network enabled to process a call;

means for detecting a call receipt condition from a destination device at said trusted telephone network;

means for brokering a connection between said destination device and an external server enabled to perform a callee identity authentication service, wherein the means for brokering a connection further comprises:

means for transmitting a request for said callee identity authentication service via a signal gateway to a network for accessing said external server,

means responsive to receiving access to said callee identity authentication service, for transferring a call to said external server,

means for transferring a prompt for a voice utterance, received from said external server via a media gateway, to said destination device,

means for transferring a voice utterance by said callee through said media gateway to said network for accessing said external server, and

means for receiving said authenticated callee identity via said signal gateway at said trusted telephone network; and

means responsive to receiving, from said external server, an authenticated callee identity of a callee utilizing said destination device, for specifying services available to said callee according to said authenticated callee identity.

25. (Original): The system for specifying telephone services according to claim 24, wherein said server is accessible via a network outside said trusted telephone network.

26. (Original): The system for specifying telephone services according to claim 24, further comprising:

means for retrieving a callee profile for said authenticated callee identity; and

means for specifying a selection of services from among a plurality of services that are offered for said call according to said callee profile.

27. (Original): The system for specifying telephone services according to claim 24, wherein said authenticated callee identity is authenticated by a voice utterance of said callee.

28. (Canceled)

29. (Original): The system for specifying telephone services according to claim 24,
wherein brokering a connection further comprises:

means for brokering a secure connection between said trusted telephone network
and said external server.

30. (Previously Presented): The system for specifying telephone services according to
claim 24, further comprising:

means for brokering a connection between an origin device accessible to said
caller and said external server, such that said caller is enabled to listen to
authentication of said callee identity.

31. (Currently Amended): A computer program-product embodied in a computer readable
medium for specifying telephone services for a particular callee, comprising:

~~a recording medium;~~

~~means, computer program instructions recorded on said a recording medium, for
detecting a call receipt condition from a destination device at a trusted telephone
network;~~

~~means, computer program instructions recorded on said recording medium, for
brokering a connection between said destination device and an external server
enabled to perform a callee identity authentication service, wherein the computer
program instructions recorded on said recording medium for brokering a
connection further comprises;~~

computer program instructions recorded on said recording medium for transmitting a request for said callee identity authentication service via a signal gateway to a network for accessing said external server,

computer program instructions recorded on said recording medium for transferring, responsive to receiving access to said callee identity authentication service, a call to said external server,

computer program instructions recorded on said recording medium for transferring a prompt for a voice utterance, received from said external server via a media gateway, to said destination device,

computer program instructions recorded on said recording medium for transferring a voice utterance by said callee through said media gateway to said network for accessing said external server, and

computer program instructions recorded on said recording medium for receiving said authenticated callee identity via said signal gateway at said trusted telephone network; and

~~means;~~computer program instructions recorded on said recording medium; for specifying services available to said callee according to an authenticated callee identity received from said external server.

32. (Withdrawn): A method for informing a caller of a callee identity, comprising:

detecting a call receipt condition from a destination device at a trusted telephone network;

brokering a connection between said destination device and an external server enabled to perform a callee identity authentication service; and

responsive to receiving, from said external server, an authenticated callee identity of a callee utilizing said destination device, transferring said authenticated callee identity to an origin device, such that a caller initiating said call at said origin device is informed of an identity of a party answering said call.

33. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

filtering content of said authenticated callee identity before transfer to said origin device.

34. (Withdrawn): The method for informing a caller of a callee identity according to claim 33, further comprising:

filtering content of said authenticated callee identity according to filtering preferences associated with said authenticated callee identity.

35. (Withdrawn): The method for informing a caller of a callee identity according to claim 33, further comprising:

filtering content of said authenticated callee identity according to an identity of said caller.

36. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

filtering said authenticated callee identity to block at least a portion of the content of said authenticated callee identity.

37. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

detecting a line number utilized to access said destination device; and

transferring said line number with said authenticated callee identity to said origin device.

38. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

detecting a line number utilized to access said destination device; and

blocking said line number from transfer to said origin device with said authenticated callee identity.

39. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

detecting a call forwarded from a first line number to a second line number; and

transferring an indicator to said origin device with said authenticated callee identity that said call is forwarded to said second line number.

40. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

detecting a call transferred from a first line number to a second line number during a call; and

brokering a connection between a current destination device accessible via said second line number and an external server enabled to perform a callee identity authentication service; and

responsive to receiving, from said external server, a current authenticated callee identity of a current callee utilizing said current destination device, transferring said current authenticated callee identity to said origin device to update said caller.

41. (Withdrawn): The method for informing a caller of a callee identity according to claim 32, further comprising:

brokering a connection between said destination device and said external server periodically throughout said call to authenticate said callee identity;

responsive to receiving, from said external server, a current authenticated callee identity differing from a previously received authenticated callee identity, transferring said current authenticated callee identity to said origin device to update said caller that the identity of the callee has changed.

42. (Withdrawn): A system for informing a caller of a callee identity, comprising:

a trusted telephone network enabled to process a call;

means for detecting a call receipt condition from a destination device at said trusted telephone network;

means for brokering a connection between said destination device and an external server enabled to perform a callee identity authentication service; and

means responsive to receiving, from said external server, an authenticated callee identity of a callee utilizing said destination device, for transferring said authenticated callee identity to an origin device to inform a caller initiating said call at said origin device of an identity of a party answering said call.

43. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for filtering content of said authenticated callee identity before transfer to said origin device.

44. (Withdrawn): The system for informing a caller of a callee identity according to claim 43, further comprising:

means for filtering content of said authenticated callee identity according to filtering preferences associated with said authenticated callee identity.

45. (Withdrawn): The system for informing a caller of a callee identity according to claim 43, further comprising:

means for filtering content of said authenticated callee identity according to an identity of said caller.

46. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for filtering said authenticated callee identity to block at least a portion of the content of said authenticated callee identity.

47. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for detecting a line number utilized to access said destination device; and

means for transferring said line number with said authenticated callee identity to said origin device.

48. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for detecting a line number utilized to access said destination device; and

means for blocking said line number from transfer to said origin device with said authenticated callee identity.

49. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for detecting a call forwarded from a first line number to a second line number; and

means for transferring an indicator to said origin device with said authenticated callee identity that said call is forwarded to said second line number.

50. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for detecting a call transferred from a first line number to a second line number during a call; and

means for brokering a connection between a current destination device accessible via said second line number and an external server enabled to perform a callee identity authentication service; and

means responsive to receiving, from said external server, a current authenticated callee identity of a current callee utilizing said current destination device, for transferring said current authenticated callee identity to said origin device to update said caller.

51. (Withdrawn): The system for informing a caller of a callee identity according to claim 42, further comprising:

means for brokering a connection between said destination device and said external server periodically throughout said call to authenticate said callee identity;

means responsive to receiving, from said external server, a current authenticated callee identity differing from a previously received authenticated callee identity, for transferring said current authenticated callee identity to said origin device to update said caller that the identity of the callee has changed.

52. (Withdrawn): A computer program product for informing a caller of a callee identity, comprising:

a recording medium;

means, recorded on said recording medium, for detecting a call receipt condition from a destination device at said a trusted telephone network;

means, recorded on said recording medium, for brokering a connection between said destination device and an external server enabled to perform a callee identity authentication service; and

means, recorded on said recording medium, for transferring an authenticated callee identity received from said external server to an origin device to inform a caller initiating said call at said origin device of an identity of a party answering said call.

53. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 52, further comprising:

means, recorded on said recording medium, for filtering content of said authenticated callee identity before transfer to said origin device.

54. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 53, further comprising:

means, recorded on said recording medium, for filtering content of said authenticated callee identity according to filtering preferences associated with said authenticated callee identity.

55. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 53, further comprising:

means, recorded on said recording medium, for filtering content of said authenticated callee identity according to an identity of said caller.

56. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 52, further comprising:

means, recorded on said recording medium, for filtering said authenticated callee identity to block at least a portion of the content of said authenticated callee identity.

57. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 52, further comprising:

means, recorded on said recording medium, for detecting a line number utilized to access said destination device; and
means, recorded on said recording medium, for transferring said line number with said authenticated callee identity to said origin device.

58. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 52, further comprising:

means, recorded on said recording medium, for detecting a line number utilized to access said destination device; and

means, recorded on said recording medium, for blocking said line number from transfer to said origin device with said authenticated callee identity.

59. (Withdrawn): The computer program product for informing a caller of a callee identity according to claim 52, further comprising:

means, recorded on said recording medium, for detecting a call forwarded from a first line number to a second line number; and

means, recorded on said recording medium, for transferring an indicator to said origin device with said authenticated callee identity that said call is forwarded to said second line number.
